

### SAM-MP4

4-line input to up to 6 outputs with the ability to switch between up to 4 alternate voice providers

### SAM-MPP

8 inputs to 8 outputs, multi-provider patch panel

### Product Description

From traditional landline services to the host of VoIP offerings marketed today, residents have more choices than ever. The challenge to manage the infrastructure to provide these choices has never been more complex. The new Multi-Provider solution delivers a new level of flexibility and functionality for today's multifamily property owners and managers. These modules facilitate a centralized distribution of phone services in each unit that is simple to manage. Each module can support a basic offering from a single telephone service provider, or a more comprehensive offering of multiple lines and multiple providers. Property staff can easily manage the phone service in each resident's unit with no expensive rewiring when residents change their phone service provider.

### Specifications

Input .....	1 x 4-pair 110 IDC and 4 x RJ11s
Output .....	6 x 4-pair 110 IDCs
Wiring .....	T568A
Alarm .....	RJ45 jack through dip switch allows for alarm auto-dialing access to line 1
